Stratage cDNA synthesis Kit (catalog number 200401) was usage synthesize the cDNA. First-strand synthesis was per with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. An Arabidopsis full-length cDNA library was constructed essentially an Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998). cDNA cleaved with BamHI and Sali glated to modified Lambda FIC-1 vector (Carninci et al., submitted for publication) digested with BamHI and Sali. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Large scale analysis of Arabidopsis full-length cDNA (2002b)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BQ740672 FROM STATE TO THE PROPERTY OF THE PRO
//notes / vector: pBluescript II SK+; Site_1: EcoRI; Site_2: //notes / vector: pBluescript II SK+; Site_1: EcoRI; Site_2: //notes / vector: pBluescript II axy old seedlings treated with that were treated from 11 day old seedlings treated with that were treated with 2 ugs/ml of a crude glucan elicitor preparation isolated from the mycelial walls of Phytophthora sojae. The library was prepared using the Stratagene pBluescript II SK(+) library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with an XhoI restriction site. EcoRI adaptors were ligated to the blunt-ended cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DHIOB host cells. Plant material was provided by Michael G. Hahn (Complex Carbohydrate Research Center, University of Georgia) and the library was constructed by Anu Khanna (Lila Vodkin lab University of Illinois)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /tissue_type="wounded cotyledons"

Introducing such sequences into plants the caller these characteristics maximises the reproductive success of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success

Introducing such sequences into plants to alter these characteristics maximises the reproductive success of the state of the sequences.

The genomic sequence is given in AAZ36948. A rice MPC1 is also disclosed in the specification. The rice and Arabidopsis cDNAs show significant homology with each other. A naturally occurring mutation of the MPC1 gene eliminates normal immediately after germination (super early flowering mutation), and leads to a truncated protein comparising amino acids 1-540 of the present sequence. The MPC1 polynucleotide sequence can be used to produce plants with altered flowering the expression with wild type plants on the sequence of inhibiting the expression of the flowering regulating gene. Antisense polynucleotides can be used to reproduce the effects of the mutated MPC1 gene. This alteration can be used to increase the yield of food crops. Flowering inhibition of vegetables increases their productivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Key

Ş 밁 QΥ

The present sequence represents a protein having a flowering regulating activity, which is designated Os-MPC1. An Arabidopsis MPC1 is also disclosed in the specification. The rice and Arabidopsis cDNAs show significant homology with each other. A naturally occurring mutation of the MPC1 gene eliminates normal flowering regulating ability of plants, and leads to flowering immediately after germination (super early flowering mutation). The MPC1 polynucleotide sequence can be used to produce plants with altered flowering times in comparison with wild type plants, by enhancing or inhibiting the expression of the flowering regulating gene. Antisense polynucleotides can be used to reproduce the effects of the mutated MPC1 gene. This alteration can be used to increase the yield of food crops. Flowering inhibition

Introducing such sequences into plants to alter these characteristics maximises the reproductive success content of the plant. This polypeptide resulted from an aberrant splice in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method of inducing the development of CC seeds in a plant, comprising inhibiting, interrupting or reducing the CC expression of a negative regulator of seed formation in one or more CC female reproductive cells, tissues, or organs of the plant or a CC progenitor cell, tissue or organ. The negative regulator is a CC polypeptide. The present sequence represents the FISS protein sequence. CC The FIS family of genes are known to be capable of regulating autonomous endougened endosperm development and/or autonomous embryogenesis. In the invention CC introduction of a transgene which comprises a FIS genetic sequence, which can invention produce parthenocarpic fruit or soft-seeded fruit, where the CC invention produce parthenocarpic or have soft seed by a process comprising comparising the introduced nucleic acid molecule in a tissue or organ of the fruit. The plant produces seed independent of fertilization. The capable of responding to the fruit are made parthenocarpic or have soft seed by a process comprising compressing the introduced nucleic acid molecule in a tissue or organ of the fruit. The plant produces seed independent of fertilization of an antisense molecule, a ribozyme, a co-suppression molecule, a production of an CC production of a transformed plant. The transformed plant is appointed to customers. Examples include stone fruits such as apricots and peaches, critis such as grapes, lemons, grapefruit and mandarins and other critis such as grapes, lemons, grapefruit and mandarins and other critis such as oranges, lemons, grapefruit and mandarins and other critis such as oranges, lemons, grapefruit and mandarins and other critis such as oranges, lemons, grapefruit and mandarins and other critis such as oranges of the invention and can be used in an enzyme linked companies and companies fertilization to companies for the peptides of the invention and can be used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                     Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or mor vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics maximises the reproductive success to alter these characteristics maximises.
                                                                                                                                                                                                                                                 Isolated vernalization gene VRNZ is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success

                                                                                           Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or more vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics maximises the reproductive success of the plant. This cDNA was generated from an aberrantly spliced VRN2
                                                                                                                                                                                                                                                                                         Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vernalization gene; VRN2; plant characteristic; flowering time leaf size; leaf shape; shade avoidance response; reproduction; breeding; pollination; cultivation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAB00064 standard; Protein; 108

Introducing such sequences into plants to alter these characteristics maximises the reproductive success of the plant. This CDNA was generated from an aberrantly spliced VKN2 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Unspecified.

 Perfect score:
 OM protein - protein search, using sw model
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 The Salk, Stanford, PGEC (SSP) Consortium members constructed and sequenced the pUNI (ORF) clones using the RAFL cDNAs: Yamada,K., Banh,J., Bano,F., Chang,E., Dale,J.M., Goldsmith,A.D., Lee,J.M., Onodera,C.S., Quach,H.L., Tang,C.C., Toriumi,M., Wu,H.C., Yamamura,Y., Yu,G., Yu,S., Bowser,L., Chen,H., Cheuk,R., Jones,T., Karlin-Neumann,G., Kim,C., Koesema,E., Lam,B., Lin,J., Meyers,M.C., Miranda,M., Nguyen,M., Palm,C.J., Shinn,P., Southwick,A., Davis,R.W., Ecker,J.R. and Theologis,A.
 Street, Albany, CA 94710, USA
The RIKEN Genomic Sciences Center (GSC) members carried out
collection and clustering of RAFL CDNAs (RAFL CDNA: 'RIKEN
Arabidopsis Full-Length cDNA'): Seki,M., Narusaka,M., Isl
Satou,M., Kamiya,A., Sakurai,T., Carninci,P., Kawai, J.,
 Yamamura,Y., Yu,G., Yu,S., Bowser,L., Carninci,P., Chen,H., Cheuk,R., Hayashizaki,Y., Ishida,J., Jones,T., Kamiya,A., Karlin-Neumann,G., Kawai,J., Kim,C., Kosema,E., Lam,B., Lin,J., Meyers,M.C., Miranda,M., Narusaka,M., Nguyen,M., Palm,C.J., Sakurai,T., Satou,M., Seki,M., Shinn,P., Southwick,A., Shinnzaki,K., Davis,R.W., Ecker,J.R. and Theologis,A.
 Yamada,K. (SSP/PGEC) and Seki, M. (RIKEN GSC) contributed equally to this work. Shinozaki,K. (RIKEN GSC) and Theologis,A. (SSP /PGEC) contributed equally to this work as PIs.

 Alignment Scores:
 The present sequence represents a VRN2 sequence from variety Landsberg erecta. The specification describes a sequence which encodes a polypeptide capable of specifically altering the flowering time of a plant. The polypeptide is encoded by the FRI (one locus-FRIGIDA) locus of Arabidopsis. The FRI polynucleotide is used to transform plants, so that the flowering time of a plant is altered. This is used, for example, for plants in which the leaves or tubers are a commercial product, where it is desirable to avoid 'blotting' (initiation of flowers and stem elongation) at too early a stage. Conversely, it may be desirable to production across the seasons.
 New nucleic acid derived from the FRI locus of a plant, e.g.
Arabidopsis, encoding a polypeptide capable of specifically altering
the flowering time of a plant

Sequence 1722 | Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or me vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plant to alter these characteristics maximises the reproductive success                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | WPI; 2000-499333/44. P-PSDB; AAB00060. Isolated vernalization gene VRN2 is used to produce transgenic with altered vernalization response, flowering time, leaf size shape or shade avoidance response for maximized reproductive such as the fig. 6: 105pp: English                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | (PLAN-) PLANT BI<br>Dean C, Gendall | 28-JAN-2000; 20<br>28-JAN-1999;  | WO200044918-A1. |                                                    | mutation                                | Arabidopsis th                   |

 Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or mor vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics maximises the reproductive success c
 Vernalization gene; VRN2; plant characteristic; leaf size; leaf shape; shade avoidance response; breeding; pollination; cultivation; ss.
 Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success

 vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plant to alter these characteristics maximises the reproductive success
 Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success \frac{1}{2}
 Dean

 AAA47752;
 AAA47752 standard;
 Sequence
 Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or more

 Flowering regulating activity; MPC1; flowering; germination; super early flowering mutation; altered flowering time; flowering regulating gene; food crop; vegetable; flowering i productivity; ss.
 13-MAR-2000
 AAZ36947;
 AAZ36947 standard; cDNA; 2280 BP
 The present sequence encodes a protein having a flowering regulating activity, which is designated MPC1. The genomic sequence is given in AAZ36948. A rice MPC1 is also disclosed in the specification. The rice and Arabidopsis cDNAs show significant homology with each other

 nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics maximises the reproductive success of the plant. This cDNA represents another Arabidopsis thaliana sequencing homology to the VRN2 gene.
 Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or me vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the
 Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success

 Title:
Perfect score:
 Minimum DB seq length: 0
Maximum DB seq length: 2000000000
 Scoring table:
 Run on:
 OM protein - nucleic search, using frame_plus_p2n model
 Total number of hits satisfying chosen parameters:
 Searched:
 Command line parameters:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,
 is derived by analysis of the total score distribution.

Maximum DB seq length: 200000000
 Total number of hits satisfying chosen parameters:
 Scoring table:
 Title:
Perfect score:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
 -YGAPOP-10 -YGAPEXT-0.5 -DELOP-6 -DELEXT-7
 derived by analysis of the total score distribution.
